

Rosalind

Rosalind

ABOUT THIS FONT

Rosalind a is a modular typeface built from a basic set of shapes and designed through a playful and experimental process. The letters were deconstructed into modules and recombined to produce multiple possibilities for each character. The curves, line values, proportions and spacing are the result of the peculiarities and quirks of each character.

The name of the font intends to spotlight the work and figure of Rosalind Franklin, whose research was a fundamental part in the scientific developments around DNA, RNA and many important discoveries, but was not recognized until after her death.

DESIGN

Fernanda Cozzi

#SCIENCE

ROSALIND | 89 PTS

deoxyribonucleic acid
and ribonucleic acid
are both linear polymers,
consisting of sugars,
phosphates and bases,
but there are some
key differences which
separate the two.

ROSALIND | 65 PTS

DEOXYRIBONUCLEIC
ACID (DNA) AND
RIBONUCLEIC ACID
(RNA) ARE BOTH
LINEAR POLYMERS,
CONSISTING OF
SUGARS, PHOSPHATES
AND BASES.

ROSALIND | 65 PTS
